

PROCURE4HEALTH INSIGHT #3

Title Challenge identification: how to identify Innovation needs?

Annex inDemand Annex 2: Call for challenges questionnaire

Annex 2: Call for challenges questionnaire

inDemand

A Responsible of the Challenge

Organisation:

Name & surname:

Position:

Unit/Department:

Email:

Phone number:

Number of Identity card (Optional):

B Selection of the related Topic

DROP DOWN MENU

Here we should propose a drop-down menu where the intrapreneurs will be able to select one of the defined Topics. This menu should show the name of the Topic as well as a short presentation of the selected Topic + the alignment with the health policies & strategies of the Challenger and/or region, country.

In this list we will allow (depending on the region) the possibility to select a Topic called "Other"

C Title of the challenge

Maximum 150 characters.

Please name your proposed Challenge.

D Acronym of the Challenge

Only one word, maximum 10 characters.

E Definition of the Challenge

Maximum 4000 characters.

Description of need, problem or lack.

Overview of the actual situation: description in detail of the challenge, the concrete situation (lack, deficit or failure), the current way to work in this and the previous data (outcomes of health and effectiveness).

F Challenge scope: Scalability

Maximum 1000 characters.

Is the defined Challenge only for your hospital? YES or NO

Explain why.

G Functional Requirements

Maximum 4000 characters.

Brief proposal of kind of ICT solution and especially its main potential features/functionality which could address the defined need.

H Expected Impact

Maximum 4000 characters.

Description of the expected situation if a new ICT solution addressing the defined need is implemented in the healthcare organisation.

Please define at least one main objective and no more than 5 secondary objectives. All of them with an indicator to measure the expected improvement. All of these will measure the impact in evaluation phase.

Quantification of the level of improvement in the key result indicator with the ICT solution that we will consider as a success pilot. This will be the objective measure by which we will consider whether a pilot is successful or not and must be previously defined in the challenge, quantified from a range of the chosen indicator (for example, the objective is to achieve a reduction of the incidence of 20% compared to the current one). It is important to show the total cost of the current process and the expected cost of the proposed solution to measure cost savings. Cost savings will be the main target of the pilot since it is very difficult to propose improvements in health outcomes with an intervention of less than one year.

I Feasibility

Maximum 4000 characters.

Question about the barrier to implement an innovative solution to address the defined Challenge.

Changes management.

J Commitment

Maximum 3000 characters.

Experience of responsible and authorization signed by head of unit responsible and table with the number of people (with their charge and gender) who are going to be involved in the inDemand model (time of availability, number of day per month...)

Add a mandatory box which says: "By submitting this Challenge, you confirm your involvement in the inDemand co-creation model and your active participation if your Challenge is selected by the Evaluation Committee".

K Declaration of no previous or current financing

Just an empty check by default.
